Awesome. I'll be dissolving the dosing solutions either Thursday or Friday and can bring an aliquot over to you guys. Thanks!

Glad to analyze for purity. When you dissolve it up we really only need a very small amount in solvent. Say a solution of 1 ng/uL (1 ug/mL) about 1 mL would do.
Mark

Sounds good. I needed to go ahead and get it into STICS last week, so I left you guys off until I could hear from you, but I think I can add you in STICS, or just put you on the abstract when I submit it, or both. Either way, the abstract is attached.

Also, we received the Nafion Byproduct 2 we ordered from SynQuest. You mentioned that you could analyze it for purity. Is that still possible? If so how much do you need?

Cheers,

You simply clear it as you are EPA and we inform our management that it is being cleared.

Hi Guys,

I'm working on a poster abstract for the SETAC Focused Topic Meeting on PFAS in Durham in August. I plan to present some of the concentration data we've generated lately and want to include you as co-authors but wanted to double check first regarding what type of clearance you all would need to go through.

Cheers,
